EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 5, line 1: "2" has been deleted and replaced with --1--.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or suggest a device or method comprising computing a median RR interval over a predetermined number of RR intervals; determining a rate zone in response to the computed median RR interval; determining a variation; and varying a count based on the determined rate zone and determined variation; computing variation differences between RR intervals of the predetermined number of RR intervals, determining how many of those variation differences are greater than the determined variation; and determining whether that number is greater than the count (which has been varied in response to the determined rate zone based on the median RR interval and the determined variation).

Although Bardy et al (5,257,621) shows computing an average RR interval and determining a variation in response to the average RR interval, Bardy does not show determining a rate zone in response to the average RR interval and varying a count in response to the determined rate zone and the variation. Rather Bardy shows classifying different tachycardias based on a count of previously recorded RR intervals that fall within certain rate zones.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Carllson (6,718,197) shows a device which determines a moving window median RR interval and establishes upper and lower threshold values based on the median. It utilizes the threshold values to classify short, long and normal RR intervals and further classifies different sequences of short, long and normal intervals in order to count different instances of ectopic beats.
